

Lectures

Contents of the lectures

The lectures are structured in main topics, related to the role of policies, market establishment and analysis, economic instruments and governance of bioenergy markets. Although each session is intended for one lecture, often it is developed throughout several sequential teaching hours, depending on the time table of each year and the course needs.

1. Background
2. The role of policy
3. Economic instruments
4. Adoption dynamics in bioenergy
5. Market behaviour
6. Governance
7. International bioenergy trade
8. Bioenergy market supply
9. International policies
10. Future trends
